CSCI 5324 - DATABASE MANAGEMENT SYSTEMS -- ARCHITECTURE AND MANAGEMENT

CREDIT HOURS: 3
PREREQUISITES: CSCI 4325 or 5320 or approval of computer science graduate advisor
GRADE REMINDER: Must have a grade of C or better in each prerequisite course.

CATALOG DESCRIPTION

Examination and appraisal of the fundamental technology of database management systems and of the practice of database systems design, database administration, and DBMS acquisition.

PURPOSE OF COURSE

Computer applications and information systems are evolving into database-centered rather than traditional file-oriented systems. Successful implementation and application of DBMS technology depend on understanding the architecture, economics, management, and future directions of such systems. This course prepares students who will become acquisitioners, and maintainers of database installations. Emphasis is placed on DBMS design and construction from a systems perspective. This course complements the applications perspective of the DBMS course, CSCI 4325/5320.

EDUCATIONAL OBJECTIVES

Upon successful completion of the course, students should be able to:

1. Demonstrate knowledge of the fundamental concepts of database technology.
2. Demonstrate knowledge of the techniques for managing the design, development, and maintenance of large database systems and data warehouses.
3. Describe the role and responsibilities of the database administrator.
4. Develop an understanding of management and social issues such as transaction management, database security, and privacy.
5. Develop an understanding of storage issues related to database administration.

COURSE CALENDAR

This course meets for a minimum of 37.5 lecture contact hours during the semester, including the final exam. Students have significant assignments based on readings from the primary literature, participate in classroom discussions regarding current research topics, complete periodic homework and laboratory/programming assignments, and periodic exams in addition to the final exam. Students are expected to prepare for any class assignments or quizzes over the material covered in class or in the reading material. Successful completion of these activities requires at a minimum six additional hours of outside of classroom work each week.
