

CSCI 3333 - DISCRETE STRUCTURES FOR COMPUTER SCIENCE

CREDIT HOURS: 3

PREREQUISITES: CSCI 1302; MATH 1314 or 2412 or 1324 or 2313

GRADE REMINDER: Must have a grade of C or better in each prerequisite course.

CATALOG DESCRIPTION

Mathematical structures for describing data, algorithms, and computing machines. Theory and application of sets, relations, functions, combinatorics, matrices, graphs, and algebraic structures which are pertinent to computer science.

PURPOSE OF COURSE

To develop logical and mathematical concepts necessary to understand and analyze computational systems. Introduce concepts, techniques, and skills necessary to comprehend the underlying structure of problems encountered in designing and implementing computer systems and software. Provide the foundations for understanding computer science topics that rely upon the comprehension of formal abstract concepts.

EDUCATIONAL OBJECTIVES

Upon successful completion of the course, students should be able to:

1. Use formal notation for propositional and predicate logic.
2. Construct formal proofs in propositional and predicate logic and use such proofs to determine the validity of English language arguments.
3. Prove conjectures using the techniques of direct proof, proof by contraposition, proof by contradiction, and proof by induction.
4. Prove the correctness of programs that contain looping constructs.
5. Demonstrate an understanding of recursive definitions and to write recursive definitions for certain sequences and collections of objects.
6. Describe how recursive algorithms execute.
7. Use set notation and set operations to prove/disprove set identities.
8. Use the Principle of Inclusion and Exclusion to find the number of elements in the union of sets.
9. Solve permutation and combination problems for a set of n distinct objects.
10. Use relations and functions and apply these concepts to ordering problems.
11. Use graphs, directed graphs, and trees as representation tools in a wide variety of contexts.

COURSE CALENDAR

This course meets for a minimum of 37.5 lecture contact hours during the semester. Students have significant weekly reading assignments. Students are expected to complete weekly homework and/or lab assignments, and 2-3 periodic exams in addition to the final exam. Students are expected to prepare for any class assignments or quizzes over the material covered in class or in the reading material. Successful completion of these activities requires at a minimum six additional hours of outside of classroom work each week.

CONTENT	Hours
The foundations	12
Propositional Logic	
Predicates	
Rules of Inferences	
Introduction to Proofs	
Basic Structures.....	7
Set Theory	
Functions	
Sequences	
Sums	
Matrices	
Algorithms.....	3
Introduction to Algorithms	
The Growth of Functions	
Complexity	
Induction and Recursion.....	6
Mathematical Induction	
Recursive Algorithms	
Program Correctness	
Counting.....	5
Counting Principles	
The Pigeonhole Principle	
Permutations and Combinations	
Recurrences.....	3
Applications of Recurrence Relations	
Solving Recurrence Relations	
Relations.....	3
Relations and Their Properties	
Representing Relations	
Graphs	3
Graphs and Graph Models	
Graph Terminology	

Representing Graphs
Introduction to Graph Algorithms

Exams.....3

TOTAL 45
